

Minnesotans take heating seriously.
VERY seriously.

Minnesota Power is serious about helping you heat your home efficiently.

Qualify for a Minnesota Power rebate by replacing your heating system's standard motor with an energy-efficient ECM or purchasing a new furnace with an ECM.

\$200 Rebate on a new forced air furnace with an integrated ECM Fan Motor.

\$100 Rebate on replacement of a standard PSC motor with a multi-speed ECM Fan Motor in a forced air furnace (oil, electric, gas, or propane) or an air handler on heat pumps.

ECMs, or electronically commutated motors, are what blow the warm air throughout your house. They can reduce operating costs and increase comfort. **Work with one of our participating contractors to take advantage of Minnesota Power ECM rebates.**

Learn more about ECMs, participating contractors and Minnesota Power rebates at www.mnpower.com/ECM or by calling **218-355-2843**.

Benefits of an ECM

- Lower annual electric operating costs (25 to 75% per year) based on usage
- As little as 80 watts of power required for operation—that's less than a standard electric light bulb
- Quieter running system
- Built-in speed controls
- Easier to maintain an even temperature throughout the home
- Increased comfort
- Lower drying effect of indoor air during the winter heating season
- Reduced stale air and improved air quality
