

Save energy this winter with a **FREE Home Energy Analysis**

A FREE Home Energy Analysis, or HEA, begins with a visit from one of our friendly professionals who will help you understand how you use energy, install energy-efficient products, and help you develop a plan to save more energy.

Get the full picture with advanced diagnostics.

Minnesota Power also offers a \$100 to \$200 rebate on a fee-for-service Advanced HEA with Building Diagnostics. Homes that are drafty or experience frequent ice dams are good candidates for a more in-depth analysis that includes blower door testing and infrared thermal scans to identify air leaks and inadequate insulation.

Need a new furnace?

Furnaces with an ECM (electronically commutated motor) use 75% less electricity than standard fan motors, saving you money.

Work with one of our participating contractors to install your new furnace with ECM and you'll receive a \$200 rebate from Minnesota Power. ComfortSystems customers are eligible for an additional \$200 rebate!

Learn more at mnpower.com/ECM

To learn more, visit mnpower.com/HEA and sign up for a free Home Energy Analysis, or view a list of participating contractors for the Advanced HEA with Building Diagnostics. You can also call us at 218-355-2843 (option 1).
