

ADVANCING THE LAST FRONTIER:

# Reduction of building plug loads

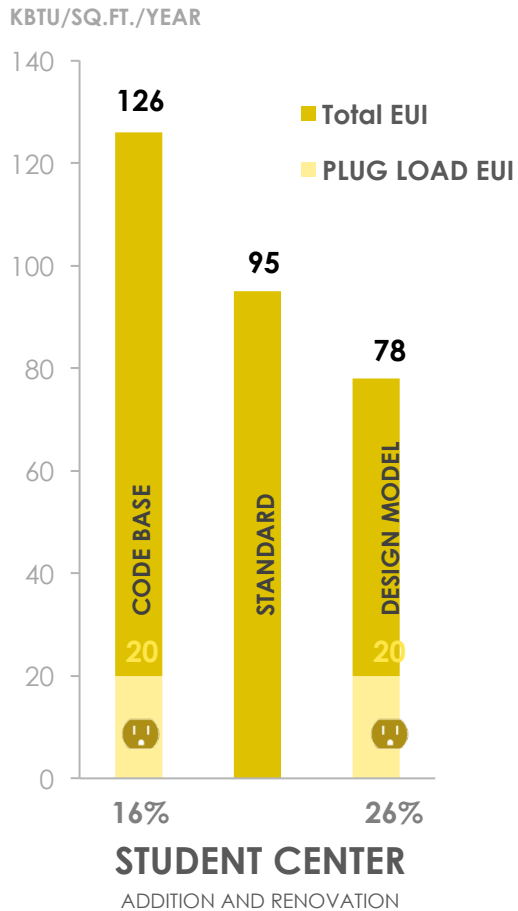

Thea Rozenbergs, LHB

Chris Plum, Center for Energy and Environment

Seventhwave (Research Partner)

# WHAT IS A PLUG LOAD?

All energy consumed by appliances, office equipment, and anything else that is not a part of the facility's primary HVAC, lighting, water heating or conveyance (elevators, escalators, etc.) systems. This includes just about anything that is actually plugged into an outlet.

# ENERGY USE ATTRIBUTED TO PLUG LOADS

# WHAT'S THE PROBLEM?

While plug loads are increasing, overall energy use intensity needs to decrease.

Currently Plug Loads = 11% of total electric load

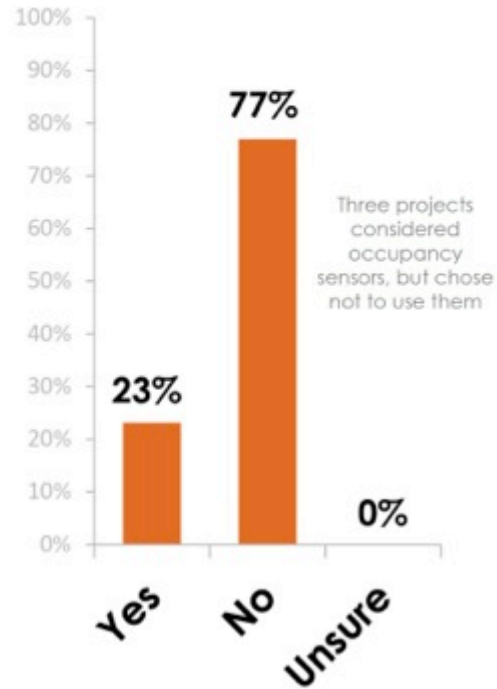

# HISTORIC APPROACH TO PLUG LOADS

Are purchasers of equipment involved in the design and modeling process?

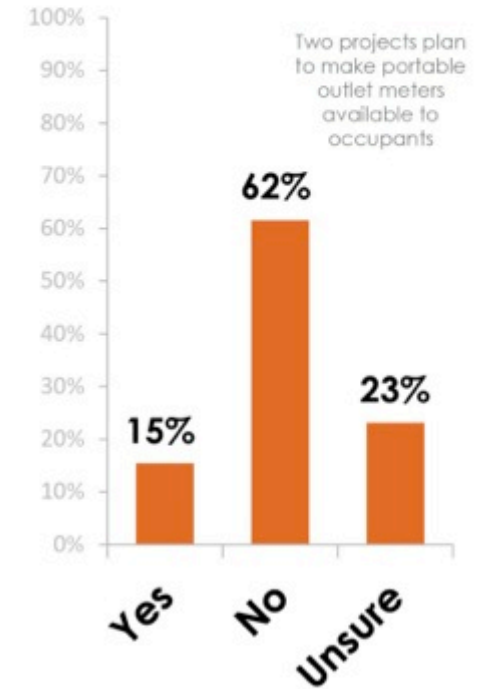

Are plug load reductions used as strategies in the energy modeling process?

Will plug loads be metered separately from other energy use in the completed building?

Is there a plan to provide plug load information to the building's occupants?

# B3/SB 2030 PLUG LOAD REQUIREMENTS

## E.1B:

For all New Buildings and Major Renovations, document predicted and actual energy use by type in the B3 Guidelines Tracking Tool, **including recording modeled plug loads and sub-metered actual plug loads** separately from other electrical loads in the built project.

# MINNESOTA ENERGY CODE

ASHRAE 90.1-2010 Prescriptive Path requires 50% of electrical outlets in offices and computer classrooms must be on automatic control so they can be switched off when the room is unoccupied

# **OFFICE PLUG LOAD REDUCTION STRATEGIES**

# ACKNOWLEDGEMENTS

This project was supported in part by:

Minnesota Conservation Applied  
Research and Development (CARD)  
Grant Program

# OVERVIEW

Background

Plug load energy in a typical office

Saving energy

Economics

Impact of behavior

Context

CREDIT: Samsung

# **BACKGROUND AND METHOD**

# DISCOVERY

## Most surveyed offices...

# of Times Each Strategy is Implemented

had at least one sustainability strategy...

are billed by actual use...

# PLUG LOAD INVENTORIES

	Self-reported (N=34 offices)	
	Average	Range
Area per person (ft <sup>2</sup> )	280	170 - 600
Desktop/workstation	0.65	0 - 1.4
Laptop/workstation	0.43	0 - 1
Monitor/workstation	1.32	0.2 - 2.4
Task Light/workstation	0.80	0 - 2.6
All other	1.40	0 - 4.8
<b>Total Plug Devices</b>	<b>4.6</b>	<b>1-10.4</b>
Phone/workstation	1.00	0.6 - 1.8

# DATA COLLECTION

First divided by treatment vs control

- First Visit: Inventory and monitoring
- Second Visit: Install plug load control measures
  - Repeated up to 2 more times
- Third visit: Remove equipment and download data

- Control
- Treatment

# MONITORING

Monitored total  
workstation electric  
AND computer only

# ENERGY SAVING STRATEGIES

Advanced power strips:

- APS – Occupancy sensor
- APS – Foot pedal

Computer power management

Behavior campaign + APS

*Common area equipment:* Basic timer

CREDIT: Tricklestar

# **PLUG LOAD ENERGY IN A TYPICAL OFFICE**

# CONTROLLABLE PLUG LOADS

- Over 40% of typical office plug load is controllable
- Workstations make up 53% of controllable load
- Common area is the rest
  - Office equipment 30%
  - Break room 16%

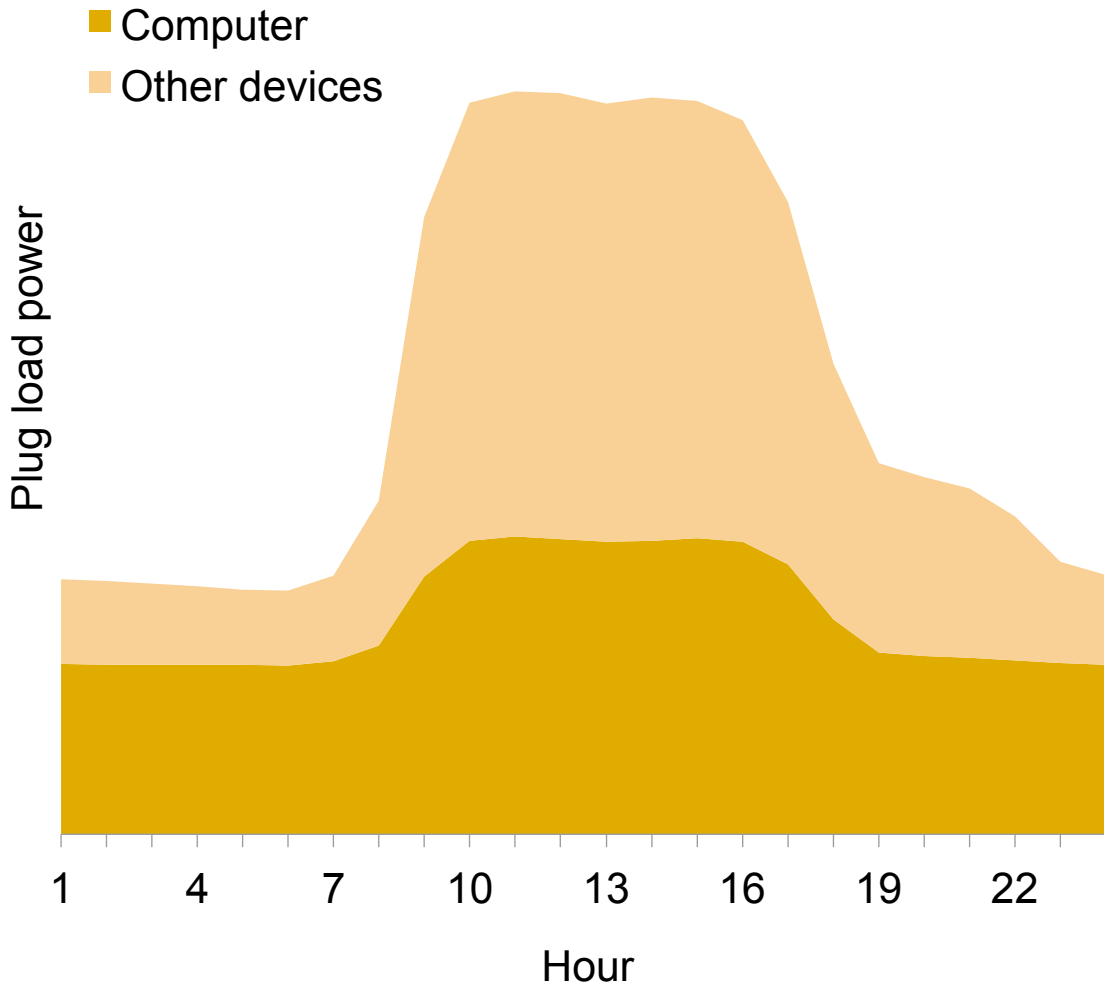

Plug Load EUI  $\approx$  19 kBtu/sq.ft.

# TYPICAL LOADS

By day...

...and for the year.

# TYPICAL LOADS - TRENDS

## Increasing use of laptops saves energy

# **SAVING ENERGY IN WORKSTATIONS**

# APS – OCCUPANCY SENSOR

CREDIT: Tricklestar

# APS – FOOT PEDAL

CREDIT: Tricklestar

# COMPUTER POWER MANAGEMENT

Consistent with ENERGY STAR recommendations

**15 MINUTES**

- Monitor off
- Hard disk off

**30 MINUTES**

- Desktops sleep
- Laptops sleep

# WORKSTATION SAVINGS

Computer power management saved the most

Other three were all variations on advanced power strips

# WORKSTATION SAVINGS

Computer power management saved the most

Other three were all variations on advanced power strips

# WORKSTATION SAVINGS

ENERGY SAVINGS				
	kWh per station	% (with 95% conf. int.)		N
Occupancy sensor	67	21.7%	± 14%	95
Computer power management	106	29.1%	± 18%	116
Foot pedal	42	19.0%	± 13%	74
Foot pedal + behavior campaign	70	22.4%	± 13%	48

# WORKSTATION SAVINGS

## These strategies are effective

- As fraction of night + weekend energy:  
53–69%

## Reducing plug loads saves cooling energy too:

- CPM: add 4–7% savings
- APS: add 0–3% savings

CREDIT: Thomas Kelsey

# TARGETING WORKSTATIONS?

**Difficult to target based on device count alone**

**Look instead for:**

- ✓ Printers
- ✓ Very large monitors
- ✓ Desktop PCs
- ✓ Those without CPM

# HOW DOES THIS COMPARE TO RESIDENTIAL?

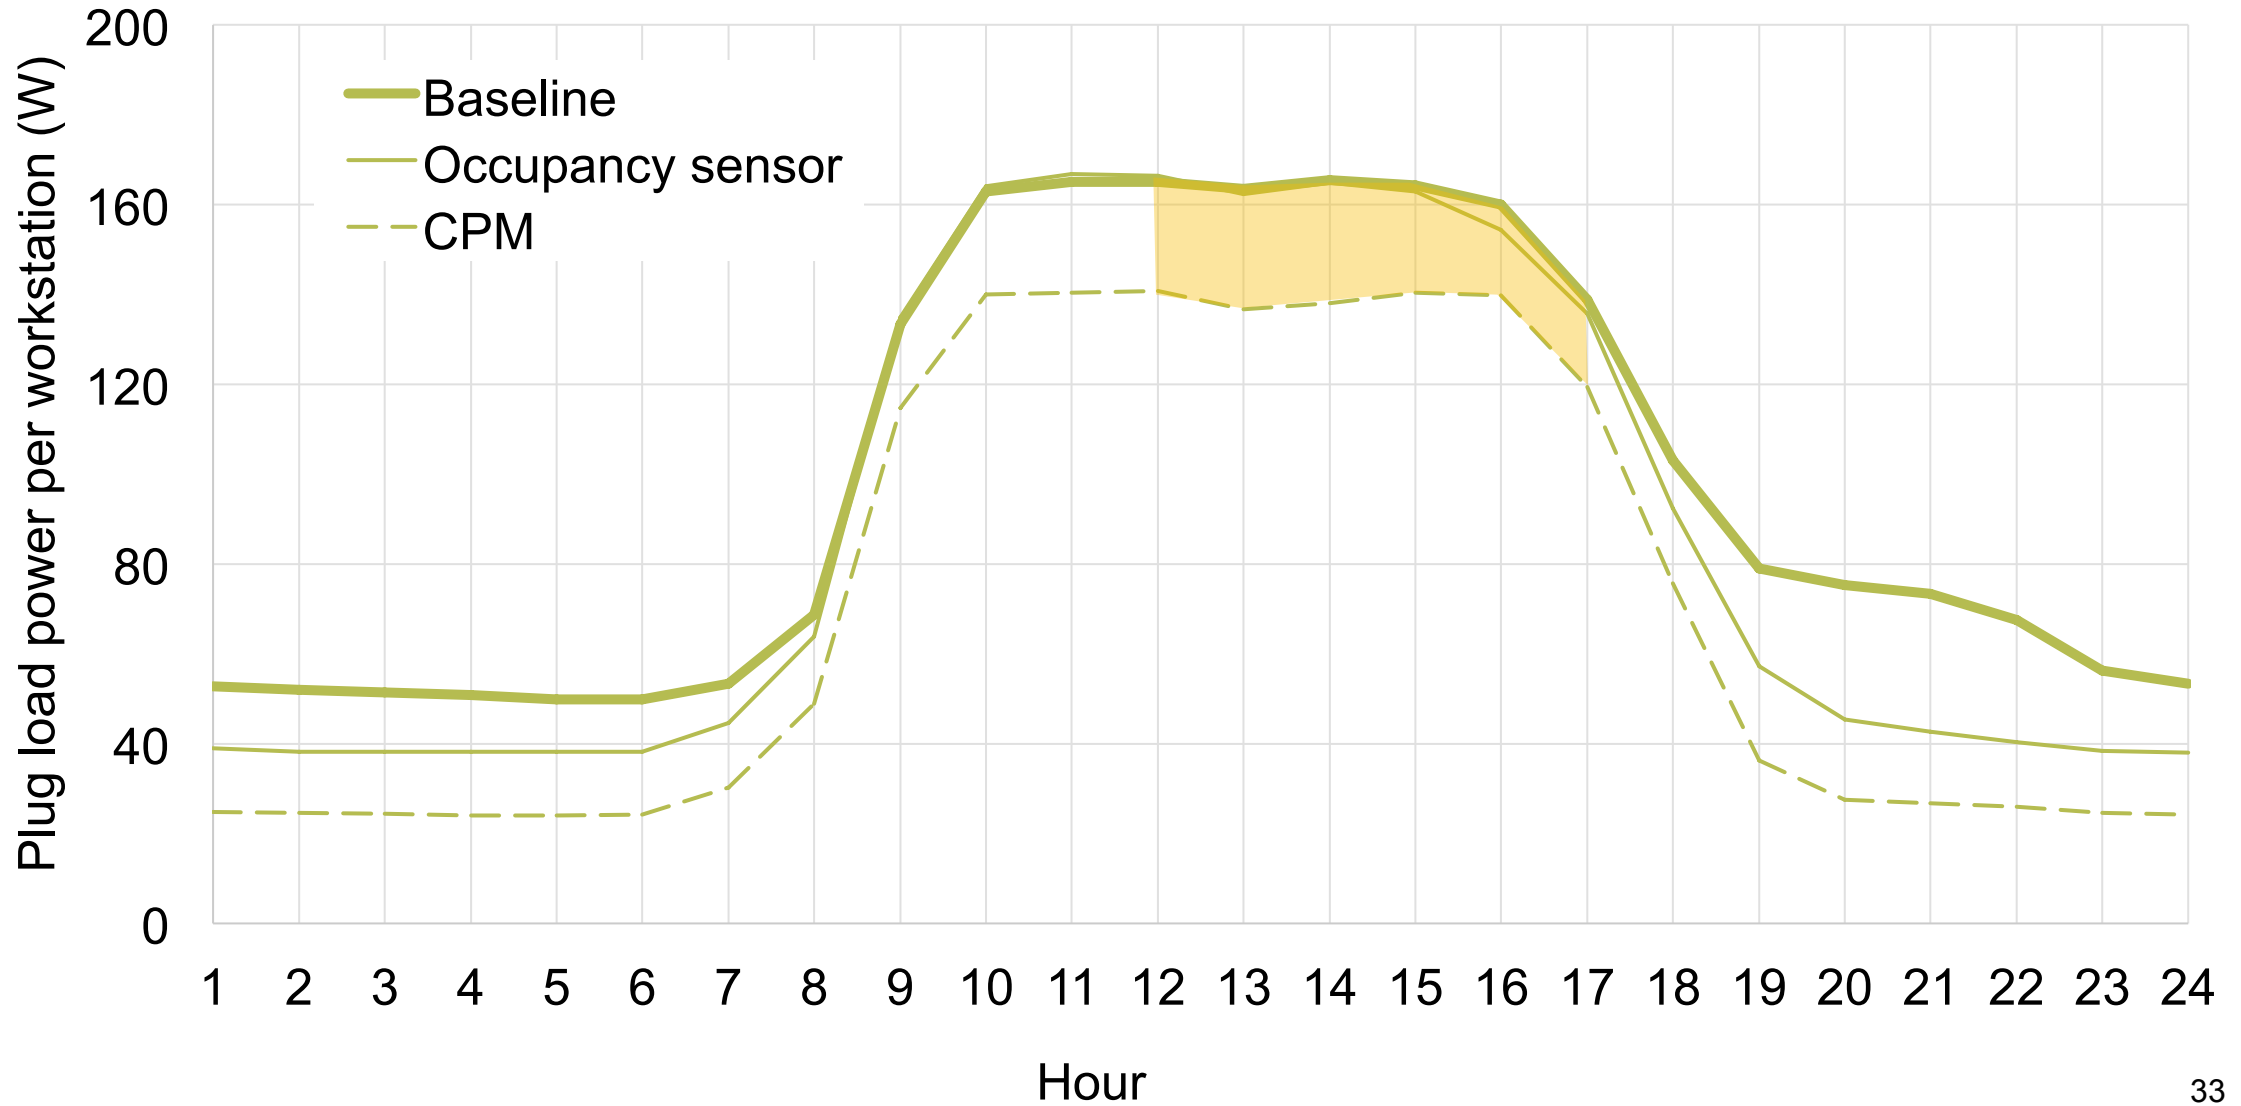

Everything from televisions to toasters, 15-30% of electric use

End Use	Percent of electric use	Percent of savings potential
TV and audio related	36%	22% - manually unplug 10% - turn off/timer 5% - power strip
Computer related	21%	40% - computer power management 5% - manually unplug 6% - power strip
HVAC related	25%	3% - turn off
Appliances (coffeemakers, toasters, microwaves, cordless phone)	8%	6% - unplug/timer
Other (clocks, chargers, hand tools, etc.)	10%	3% - timer/unplug

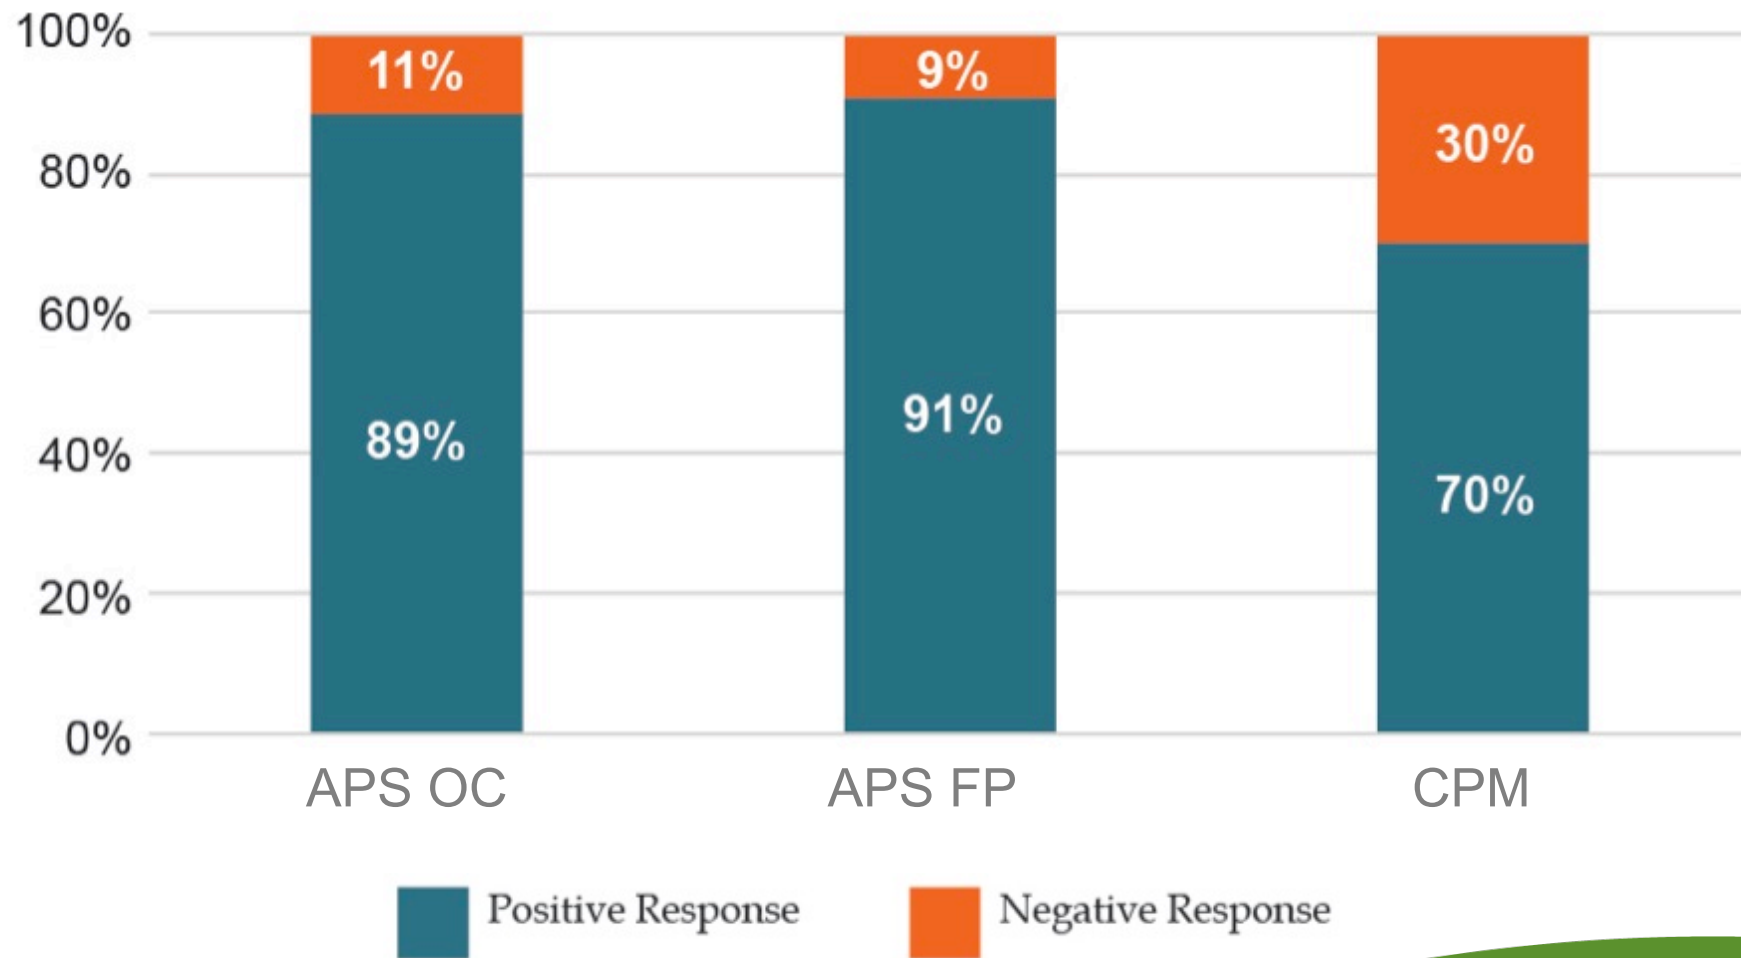

# PEAK DEMAND IMPACT

# PARTICIPANT FEEDBACK

# PARTICIPANT FEEDBACK

# IMPLEMENTING CPM

	CPM as found	Concerns / barriers posed
Architecture	None	Large
City public works	User-controlled	None
Engineering	None	Moderate
City office	None	Small
Real estate	User-controlled	None
Product development	Weak settings	Small
County office	None	Large
Energy nonprofit	User-controlled	Small

Improved	Network policy used	
X	X	Nearly all concerns overcome
X	X	Remote desktop was only barrier
X		Fully outsourced IT
X	X	
		IT: Computers must run 24/7
X	X	

**Problems with solutions:** Remote access | Pushing updates | Problem software | Other IT priorities

# CONCLUSIONS FOR WORKSTATIONS

## Computer power management

- Not widely implemented
- Effective with existing software
- IT concerns have solutions

## Advanced power strips

- Simple controls can save

## Cooperation: IT + Sustainability staff

# **SAVING ENERGY IN COMMON AREAS**

# COMMON AREA EQUIPMENT

## Evaluate needs!

	Annual energy usage
	kWh
Desktop printers	170
Medium-sized MFDs	352
Coffeemakers	548
Televisions	67
Water coolers	386

PHOTO CREDIT: Wikimedia commons

# COMMON AREA TIMER SAVINGS

	Energy savings		Idle power	N
	kWh	%	W	
Projectors	0	0	0	6
Televisions	43	42%	12	3
Desktop printers	47	27%	16	6
Medium-sized MFDs	51	17%	19	7
Water coolers	104	21%	—	4
Coffeemakers	110	18%	30	5

# COMMON AREA EQUIPMENT - OTHER

- TV backlight settings
- Choice of coffee service

**760 kWh**

**280 kWh**

CREDIT: Adam Dachis

# PARTICIPANT FEEDBACK

## Common area equipment timers:

96% of respondents indicated that they did not notice any change/inconvenience

Most issues were related to equipment that is not designed for hard shutdown (MFDs, video conferencing equipment, etc.)

# **ECONOMICS**

# COSTS

- **APS . . . . . \$55**
- **APS—for new workstation. . . . . \$35**
- **Common area timers . . . . . \$36**
- **CPM . . . . . \$17**

# COSTS + BENEFITS

	APS	APS	CPM	Timer	Timer
	new workstation	existing workstation		beverage	MFD / printer
Simple payback	5.8 years	8.4 years	1.6 years	3.3 years	6.6 years

# **IMPACT OF BEHAVIOR**

# BEHAVIOR CAMPAIGN PLANNING

## Stakeholder interviews revealed the following design needs:

- Allow user to easily and conveniently turn off the devices.
- Remind user that the devices have been left on.
- Help create social norms to help others perform the action.
- Allow others like co-workers or facilities/custodial personnel to help the action be performed.

## Solution:

- APSs with foot switches
- LED status lights

# BEHAVIOR CAMPAIGN + APS

## POWER DOWN

TOGETHER, WE CAN REDUCE  
PLUG LOAD ENERGY USAGE IN  
THE 1902 BUILDING.

AS A CITY, we have made great strides in reducing our environmental footprint—but we can do more—especially in the area of plug load energy.

As part of this effort to improve, you'll notice we've tried some technological strategies (and are measuring those as part of a research project) to reduce plug loads at some of the workstations in the 1902 Building. **But now it's time to get EVERYONE involved in trying to save energy through individual actions.** As part of this effort, you'll notice some workstations have received blue, microwatt LEDs to remind occupants to turn off their equipment. We hope these will also serve to remind us ALL to turn equipment and lights off.

To help inspire everyone, **your efforts will be rewarded by treats** (in addition to that warm, fuzzy feeling) if we catch you in the act of saving energy!

### TO GET STARTED, SOME ACTIONS YOU CAN TAKE INCLUDE

- **"Hit the switch"** to turn off unneeded plug loads whenever leaving your desk
- **Unplug** any electronics that are only rarely used (printers, radios, chargers)
- At the end of the day, **shut down or hibernate** your computer (when you won't need remote access)
- **Brag** about your energy-saving actions to co-workers and get them saving too!

# IMPACT OF BEHAVIOR

## City public works

APS savings alone:

... with behavior campaign:

## Engineering

APS savings alone:

... with behavior campaign:

# BEHAVIOR CHANGE CAMPAIGN

Social norm **“Lights off!”**

“What the lights are good for is providing awareness of the energy state of my cubicle.”

“The blue indicator lights were often called ‘the blue light of shame.’”

# **CONTEXT, CONCLUSIONS**

# CHECK THE CLOSET

# BROADER CONTEXT

Targeting plug load during design is an effective strategy....

# ENERGY USE ATTRIBUTED TO PLUG LOADS

# **PLUG LOAD CASE STUDY**

## **LHB OFFICE**

# PROCESS

- Create an Energy Management Team
- Submeter plug loads to create a baseline
- Set goals
- Take action and record as “Events” in B3 Benchmarking
- Track results

# GOALS

**Data Center:**  
15% reduction

**Plug loads:**  
20% reduction

**Total Electricity:**  
16% reduction

LHB-MSP Electricity Use Intensity  
(kBtu/sf)

# ACTIONS

## 1. ALWAYS ON OUTLETS

Plug anything that must remain on at all times into these outlets  
(Optional: CPU if you use remote desktop, headsets)

## 2. MASTER

Select one device at your desk to be a control. Plug this control device into the "Master" outlet.  
When you turn this device off, power to the "Controlled" outlets will be turned off.  
(If you use your computer when you do a "shut down" at the end of the day everything else will turn off. This device could also be your primary monitor)

## 3. CONTROLLED BY MASTER

Plug anything that can be powered down in the "Controlled" outlets. When you shut down your control, or "Master" device, power to these outlets will be cut off. Think of it as "hitting the switch" on a typical power strip.  
(phone chargers, computer monitors, etc.)

NOTE: DO NOT PLUG YOUR COMPUTER TOWER INTO THE CONTROLLED OUTLETS

## 4. SWITCH

Flip the switch to "Auto" to enable the advanced power control in your smart power strip.

- Computer power management
- Advanced power strips
- Behavior campaign
  - Updates at staff meeting
  - Education on use of advanced power strips
  - Feedback meters
  - Outreach prior to holiday weekends

# RESULTS

# RESULTS

LHB-MSP Electricity Use 2016-2018  
(kBtu)

**19.8% reduction in plug loads**

# NEXT STEPS

- Behavior campaign
  - Implement monitor brightness adjustments
  - Evaluate opportunities for remote desktop users
  - Plug load competition
- Efficient equipment purchasing policy + standard for new workstations
- Timer controls for common area equipment

Take care of your energy chickens!

Level -2	Level -1	Baseline 0	Level +1	Level +2
				

# BULLITT CENTER CASE STUDY

<http://www.bullittcenter.dreamhosters.com/building/building-features/>

**92 EUI = Typical Office Building**  
**16 EUI = Bullitt Center**  
**31.4% of EUI = Plug Load**

\*\*PAE Consulting Engineers, Inc.

# BULLITT CENTER CASE STUDY

<http://www.bullittcenter.dreamhosters.com/building/building-features/>

**92 EUI = Typical Office Building**

**16 EUI = Bullitt Center**

**31.4% of EUI = Plug Load**

## TAKES ADVANTAGE OF THE SUN

- 82% of interior is naturally daylit (reduces task lighting)
- 14,303 sq.ft. solar array (230,000 kWh/year)

## ACTIVE DESIGN

- Irresistible stair design encourages use
- Hidden elevator

## SMART TECHNOLOGICAL CHOICES

- Regenerative elevator designed by KONE converts potential energy from braking into useable electricity which saves 60% of its energy
- Energy Efficient Computers
- Computerized systems to help manage building systems

## MEASUREMENT & FEEDBACK LOOP

- Dashboard shows real-time data about energy and water use
- Each tenant has agreed to an energy allowance as part of lease

# DESIGN IMPLICATIONS

## Target plug loads

- New codes/Energy Design Assistance
- Separate plug loads onto dedicated electrical panels

## Tailor workspaces

- Equipment size
- Workstation types

## Kitchenettes and common spaces

- Number, location, and efficiency of equipment

## Lighting, thermal comfort

- Reduce need for personal task lights, heaters & fans

## KEY TAKE-AWAYS

- Relatively simple solutions are available to save 30% or more
- There's value in discussing behavior
- IT can impact energy efficiency
- Though some loads are moving out of the workstation, significant savings remains
