

# Achieving Superior Energy Efficiency

in Commercial and Multi-Family Buildings through Passive House

2019 Duluth Energy Design Conference

*precipitate*  
ARCHITECTURE PLANNING RESEARCH

 THE SHEWARD PARTNERSHIP, LLC  
[www.thesewardpartnership.com](http://www.thesewardpartnership.com)

Elizabeth Turner  
AIA, CPHC

Chloe Bendistis  
AIA, LEED AP BD+C

# CONTINUING EDUCATION

In accordance with the Department of Labor and Industry's statute 326.0981, Subd. 11,

"This educational offering is recognized by the Minnesota Department of Labor and Industry as satisfying **1.5 hours** of credit toward **Building Officials** continuing education requirements."

For additional continuing education approvals, please see your credit tracking card.

# LEARNING OBJECTIVES

1. Describe the challenges and benefits of applying PHIUS+ Passive House certification to a commercial and large multi-family project.
2. Understand the PHIUS Passive House certification process and timeline.
3. Explain the health and wellness benefits of building to the PHIUS+ Passive House Standard.
4. Describe how increasing the efficiency of the building envelope can significantly reduce the size, complexity, and cost of HVAC systems.
5. Analyze building energy models to inform decisions throughout the design process.
6. Understand the role engineers can expect to play in collaboration with passive house consultants and the design team.
7. Analyze the financial costs and tradeoffs of building a passive building versus a code compliant building.

# PRESENTATION OVERVIEW

Introduction

Overview of Passive House

Questions

## REAL-TIME POLLING

We invite you to participate with your smart phone! To start, send the following text message.

To: **22333**

Message: **chloebendist474**

You'll receive a response from "Poll Everywhere" confirming your participation.

# Your poll will show here

## GREEN BUILDING TRENDS

- Greater focus on occupant health and well-being
- Improve occupant engagement, productivity, and satisfaction
- Balance energy efficiency with superior indoor environmental quality and comfort

# IMPROVED VENTILATION

- Study compared standard office environment with improved indoor conditions
  - VOC contaminants
  - Outdoor air rates
- Superior indoor air quality resulted in improved focus and problem solving abilities

Harvard Center for Health & the Global Environment - 2015

**24** PARTICIPANTS

**6** DAYS **OVER** **2 WEEKS**

## 2 TESTS

1

**Multivariable test for building types:**

Conventional

i.e., Typical Office

Green

Low VOC

Enhanced Green

Low VOC and High Ventilation

2

**Single-variable test for carbon dioxide:**

**PARTICIPANTS EXPERIENCED**

**SIGNIFICANTLY BETTER COGNITIVE FUNCTION**

**FEWER HEALTH SYMPTOMS**

**BETTER PERCEIVED INDOOR ENVIRONMENTAL QUALITY**

**BASED ON THE FOLLOWING COGNITIVE FUNCTION DOMAINS**

- Basic activity level
- Applied activity level
- Focused activity level
- Task orientation
- Crisis response
- Information seeking
- Information usage
- Breadth of approach
- Strategy

# EMISSIONS & HEALTH

- Coal-fired power plants result in harmful emissions and outdoor air pollution
- Hazardous air quality conditions can exacerbate asthma and allergy symptoms
- Childhood asthma is the leading cause of student absenteeism and accounts for 13.8 million missed school days each year

# PASSIVE HOUSE OVERVIEW

The Distillery - Boston

# PASSIVE HOUSE INSTITUTE US

- Passive House Institute initially founded in 1996 in Germany
- PHIUS established in 2007
- PHIUS+ 2015 released 3/2015
  - Cost-effective passive energy efficiency strategies
  - Cost-optimized by climate zone
  - Software, tools, and support
  - Third-party verification required

Group Design Build – Residence, Cambridge MA

# CLIMATE SPECIFIC TARGETS

## Minneapolis, MN Targets

- Heating demand 7.4 kBtu/SFyr
- Cooling Demand 2.31 kBtu/SFyr
- Heating Load 5.4 Btu/hr SF
- Cooling Load 4.2 Btu/hr SF
- Source Energy 6200 kWh/Person yr
- Air Tightness 0.05 cfm50/SF  
(0.4 ACH50 for this building)

# PHIUS+ 2015 PRINCIPLES

Superinsulation

High Performance  
Windows & Doors

Eliminate Thermal  
Bridges

Optimize Solar Gain

Airtightness

Energy Recovery  
Ventilation

# ENERGY MODELING

- Holistic, iterative analysis tool during design
- Not a “proof model” at the end of design
- Calculate first cost, operating cost, and return on investment

# WUFI Passive

WUFI Passive V.3.1.1.0 S:\OneDrive\Precipitate\PROJECTS - P1702 Hook & Ladder\WUFI Passive Modeling\HookandLadder1804 - revised DHW values.mwp

# CASE STUDY #1

# PROJECT INTRODUCTION

# THE GODDARD SCHOOL

- Providing private preschool and daycare for over 30 years
- 65,000 students in more than 460 schools in 36 states
- 6 weeks to 6 years old
- Comprehensive play-based curriculum

# BE AMAZING, LLC

- Franchise per corporate design standards
- Family team planning for long-term ownership
- Sustainability Goals
  - Environmental stewardship
  - Occupant health
  - Ongoing operational costs

# Don't wait for the “the unicorn client”

Building Green Blog Post “Why We Let Ourselves Do Mediocre Work”  
by Tristan Roberts

# PROJECT OVERVIEW

- Plymouth Meeting, Pennsylvania
- Prototype building plan
- 56,000 square foot lot
- 8,700 square foot building
- 132 students and 32 adults
- Project Team
  - Owner: Be Amazing, LLC
  - Architects: The Sheward Partnership
  - MEP Engineers: Alderson Engineering
  - Contractor: MidAtlantic Construction
  - CPHC: The Sheward Partnership

# TIMELINE

Sep 2015  
**Feasibility Study**

Sep 2016  
**Bid Set**  
Some sustainability strategies were bid as add alternates

Oct 2017  
**Occupancy**

Jan 2018  
**Achieved LEED Gold Certification**

2015

2016

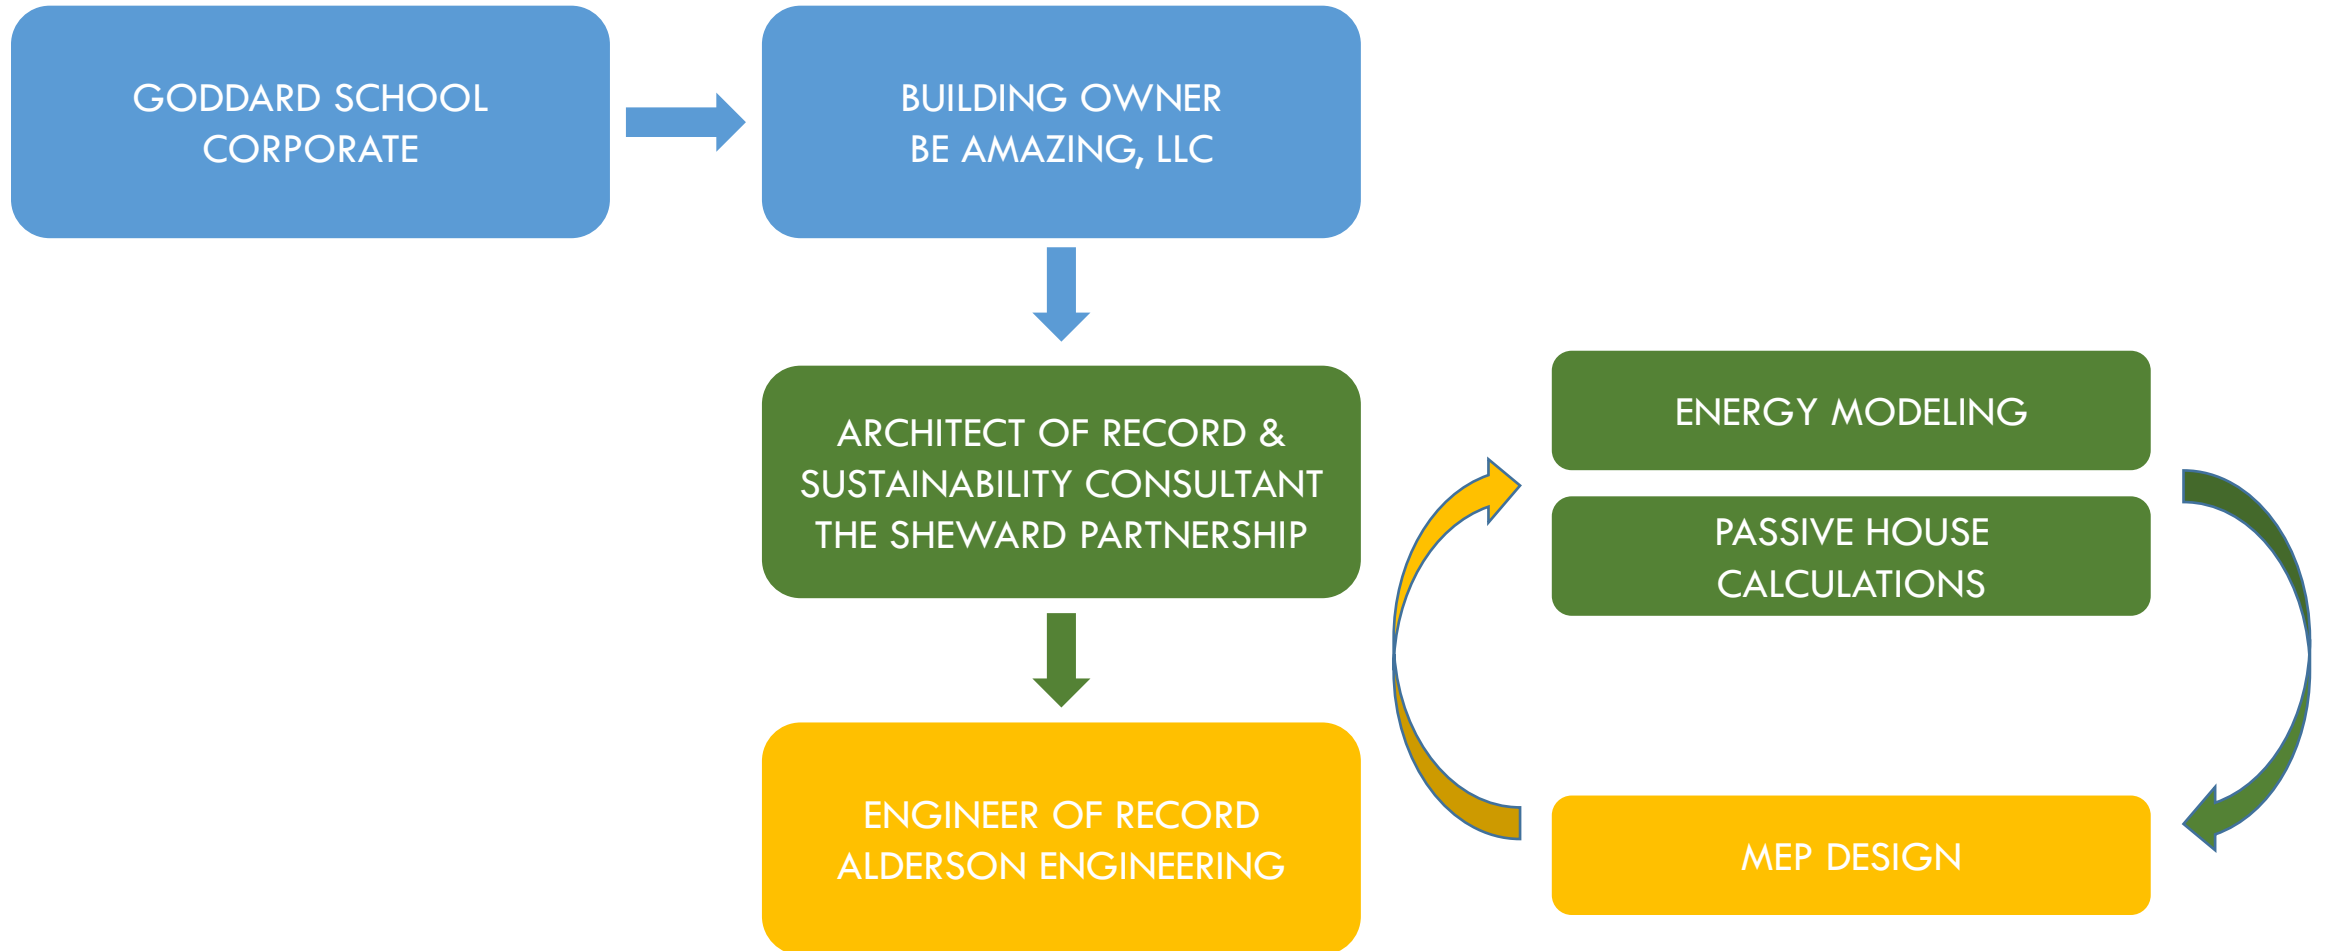

2017

2018

Jan 2016  
**Sustainability Goal Setting Charrette**  
Due to Pennsylvania green building grant, targeted LEED Gold and PHIUS+ 2015 certification

Jan 2017  
**Construction Start**  
Budget constraints resulted in pursuit of LEED Gold certification only

# TEAM STRUCTURE

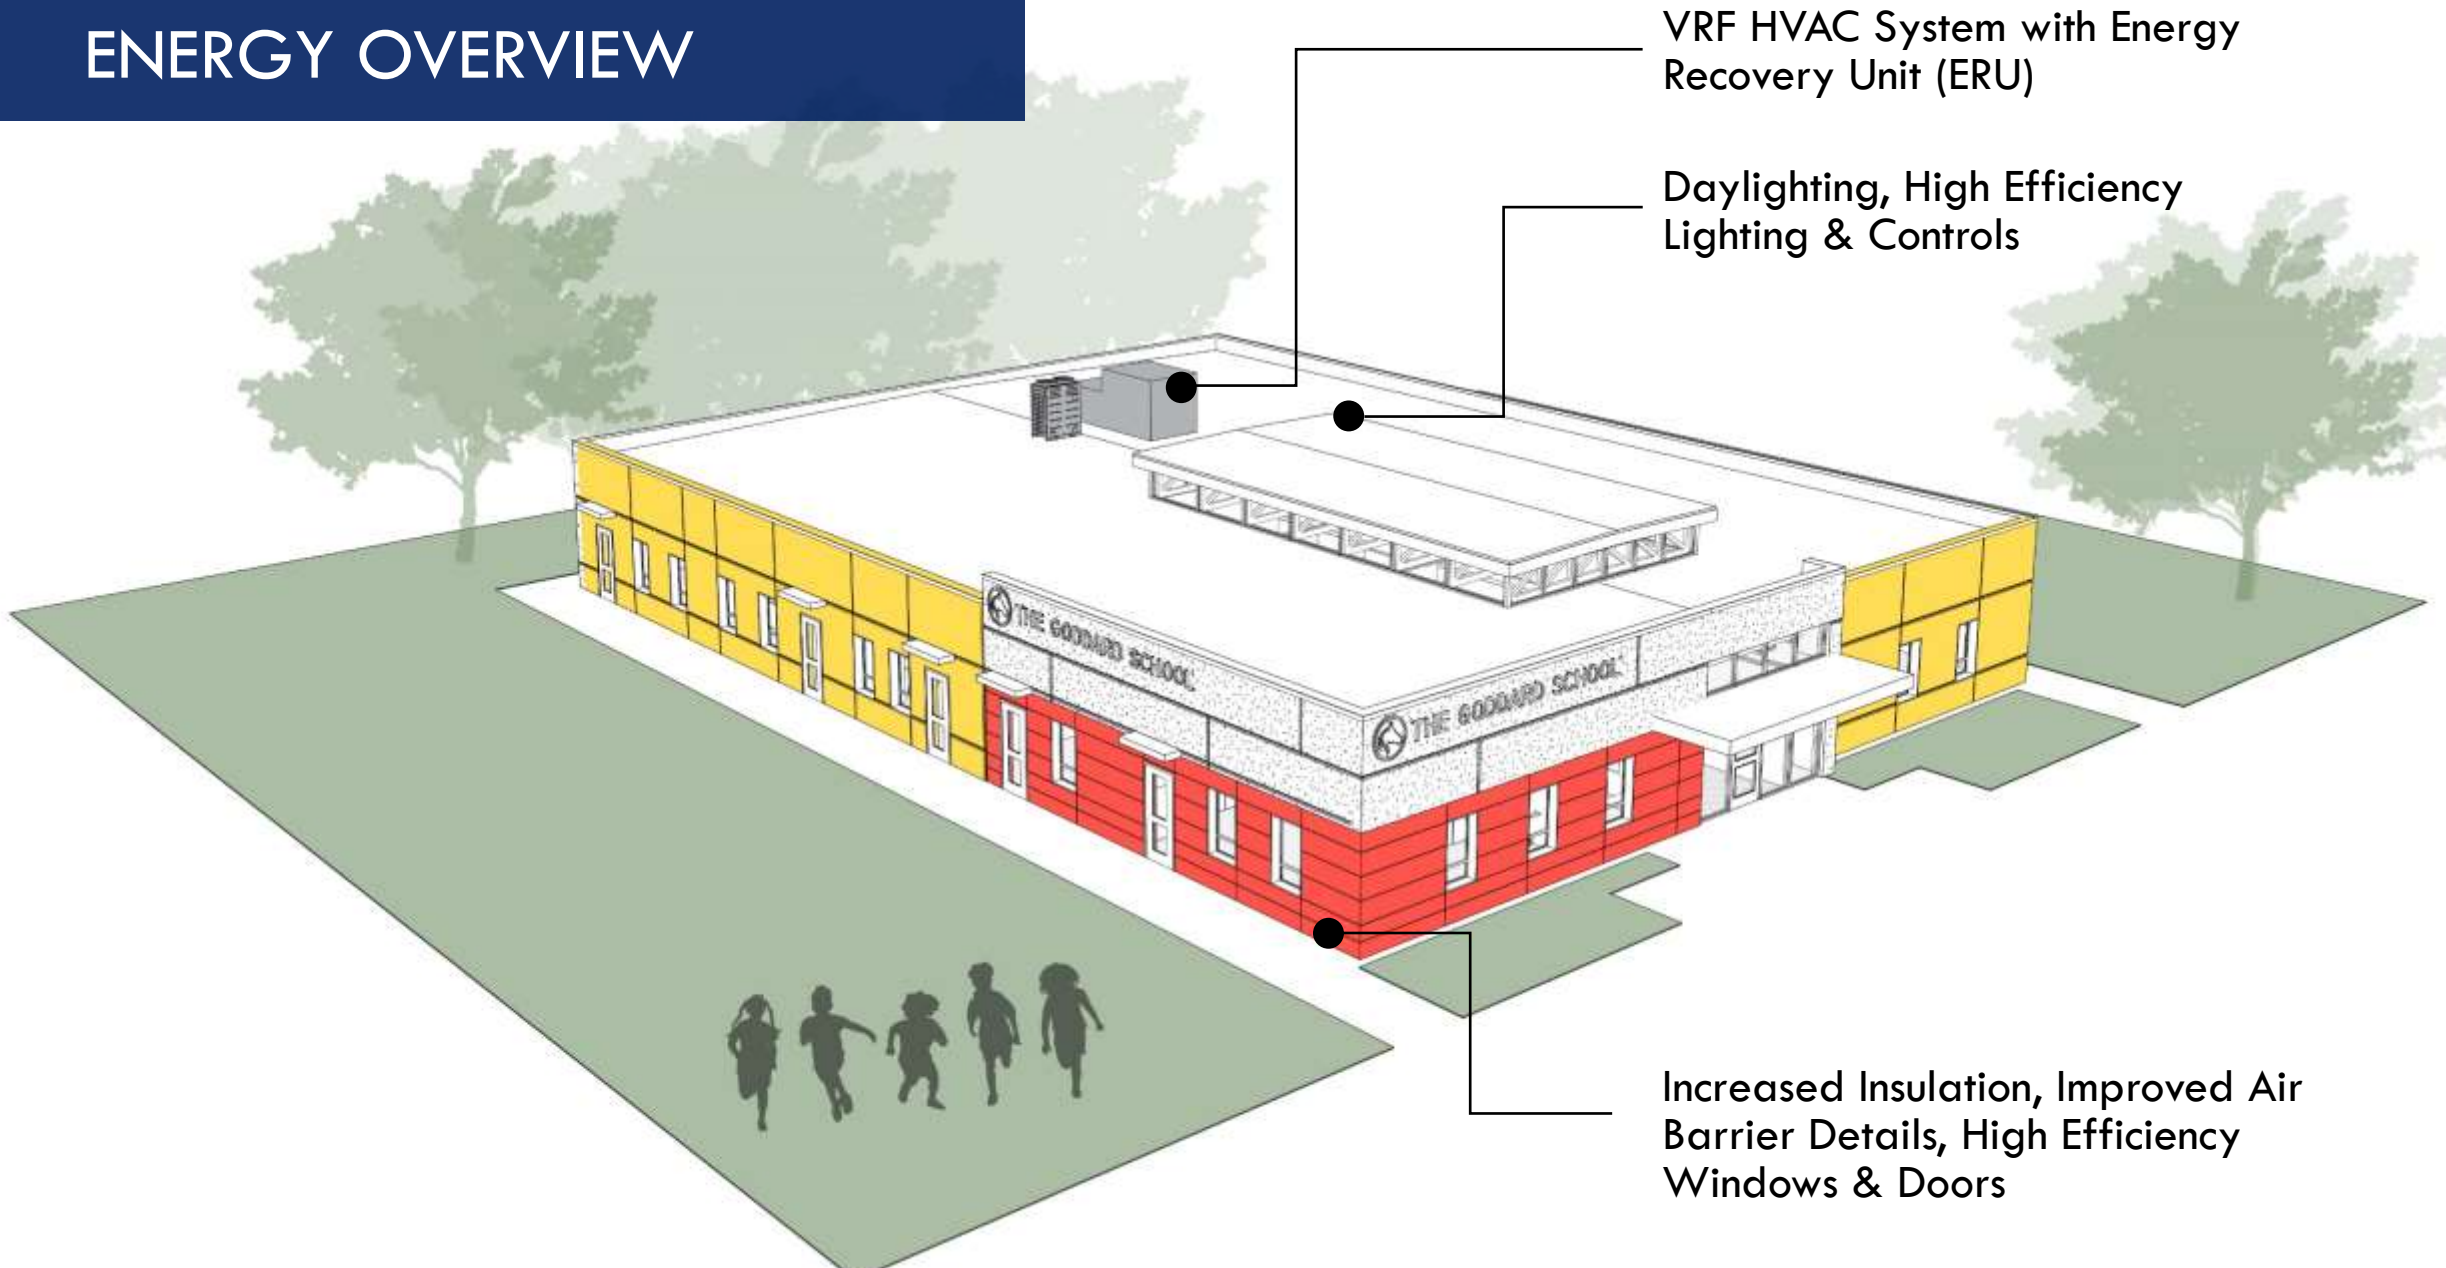

# ENERGY MODELING AS A TOOL

# ENERGY OVERVIEW

VRF HVAC System with Energy Recovery Unit (ERU)

Daylighting, High Efficiency Lighting & Controls

Increased Insulation, Improved Air Barrier Details, High Efficiency Windows & Doors

# ENVELOPE

## Code Baseline

Roof Insulation	R-20
Wall Insulation	R-13 + R-7.5 CI
Slab Insulation	None
Casement Window	U-0.40
Curtain Wall	U-0.50

## Actual Installation

Roof Insulation	<b>R-50</b>
Wall Insulation	<b>R-20 + R-20 CI</b>
Slab Insulation	<b>R-12 CI</b>
Casement Window	<b>U-0.15</b>
Curtain Wall	<b>U-0.39</b>

\* Shading from Overhangs

# AIR BARRIER

- Details in construction documents
- Highlight air barrier continuity
- Aid design and construction teams

# LIGHTING & DAYLIGHTING

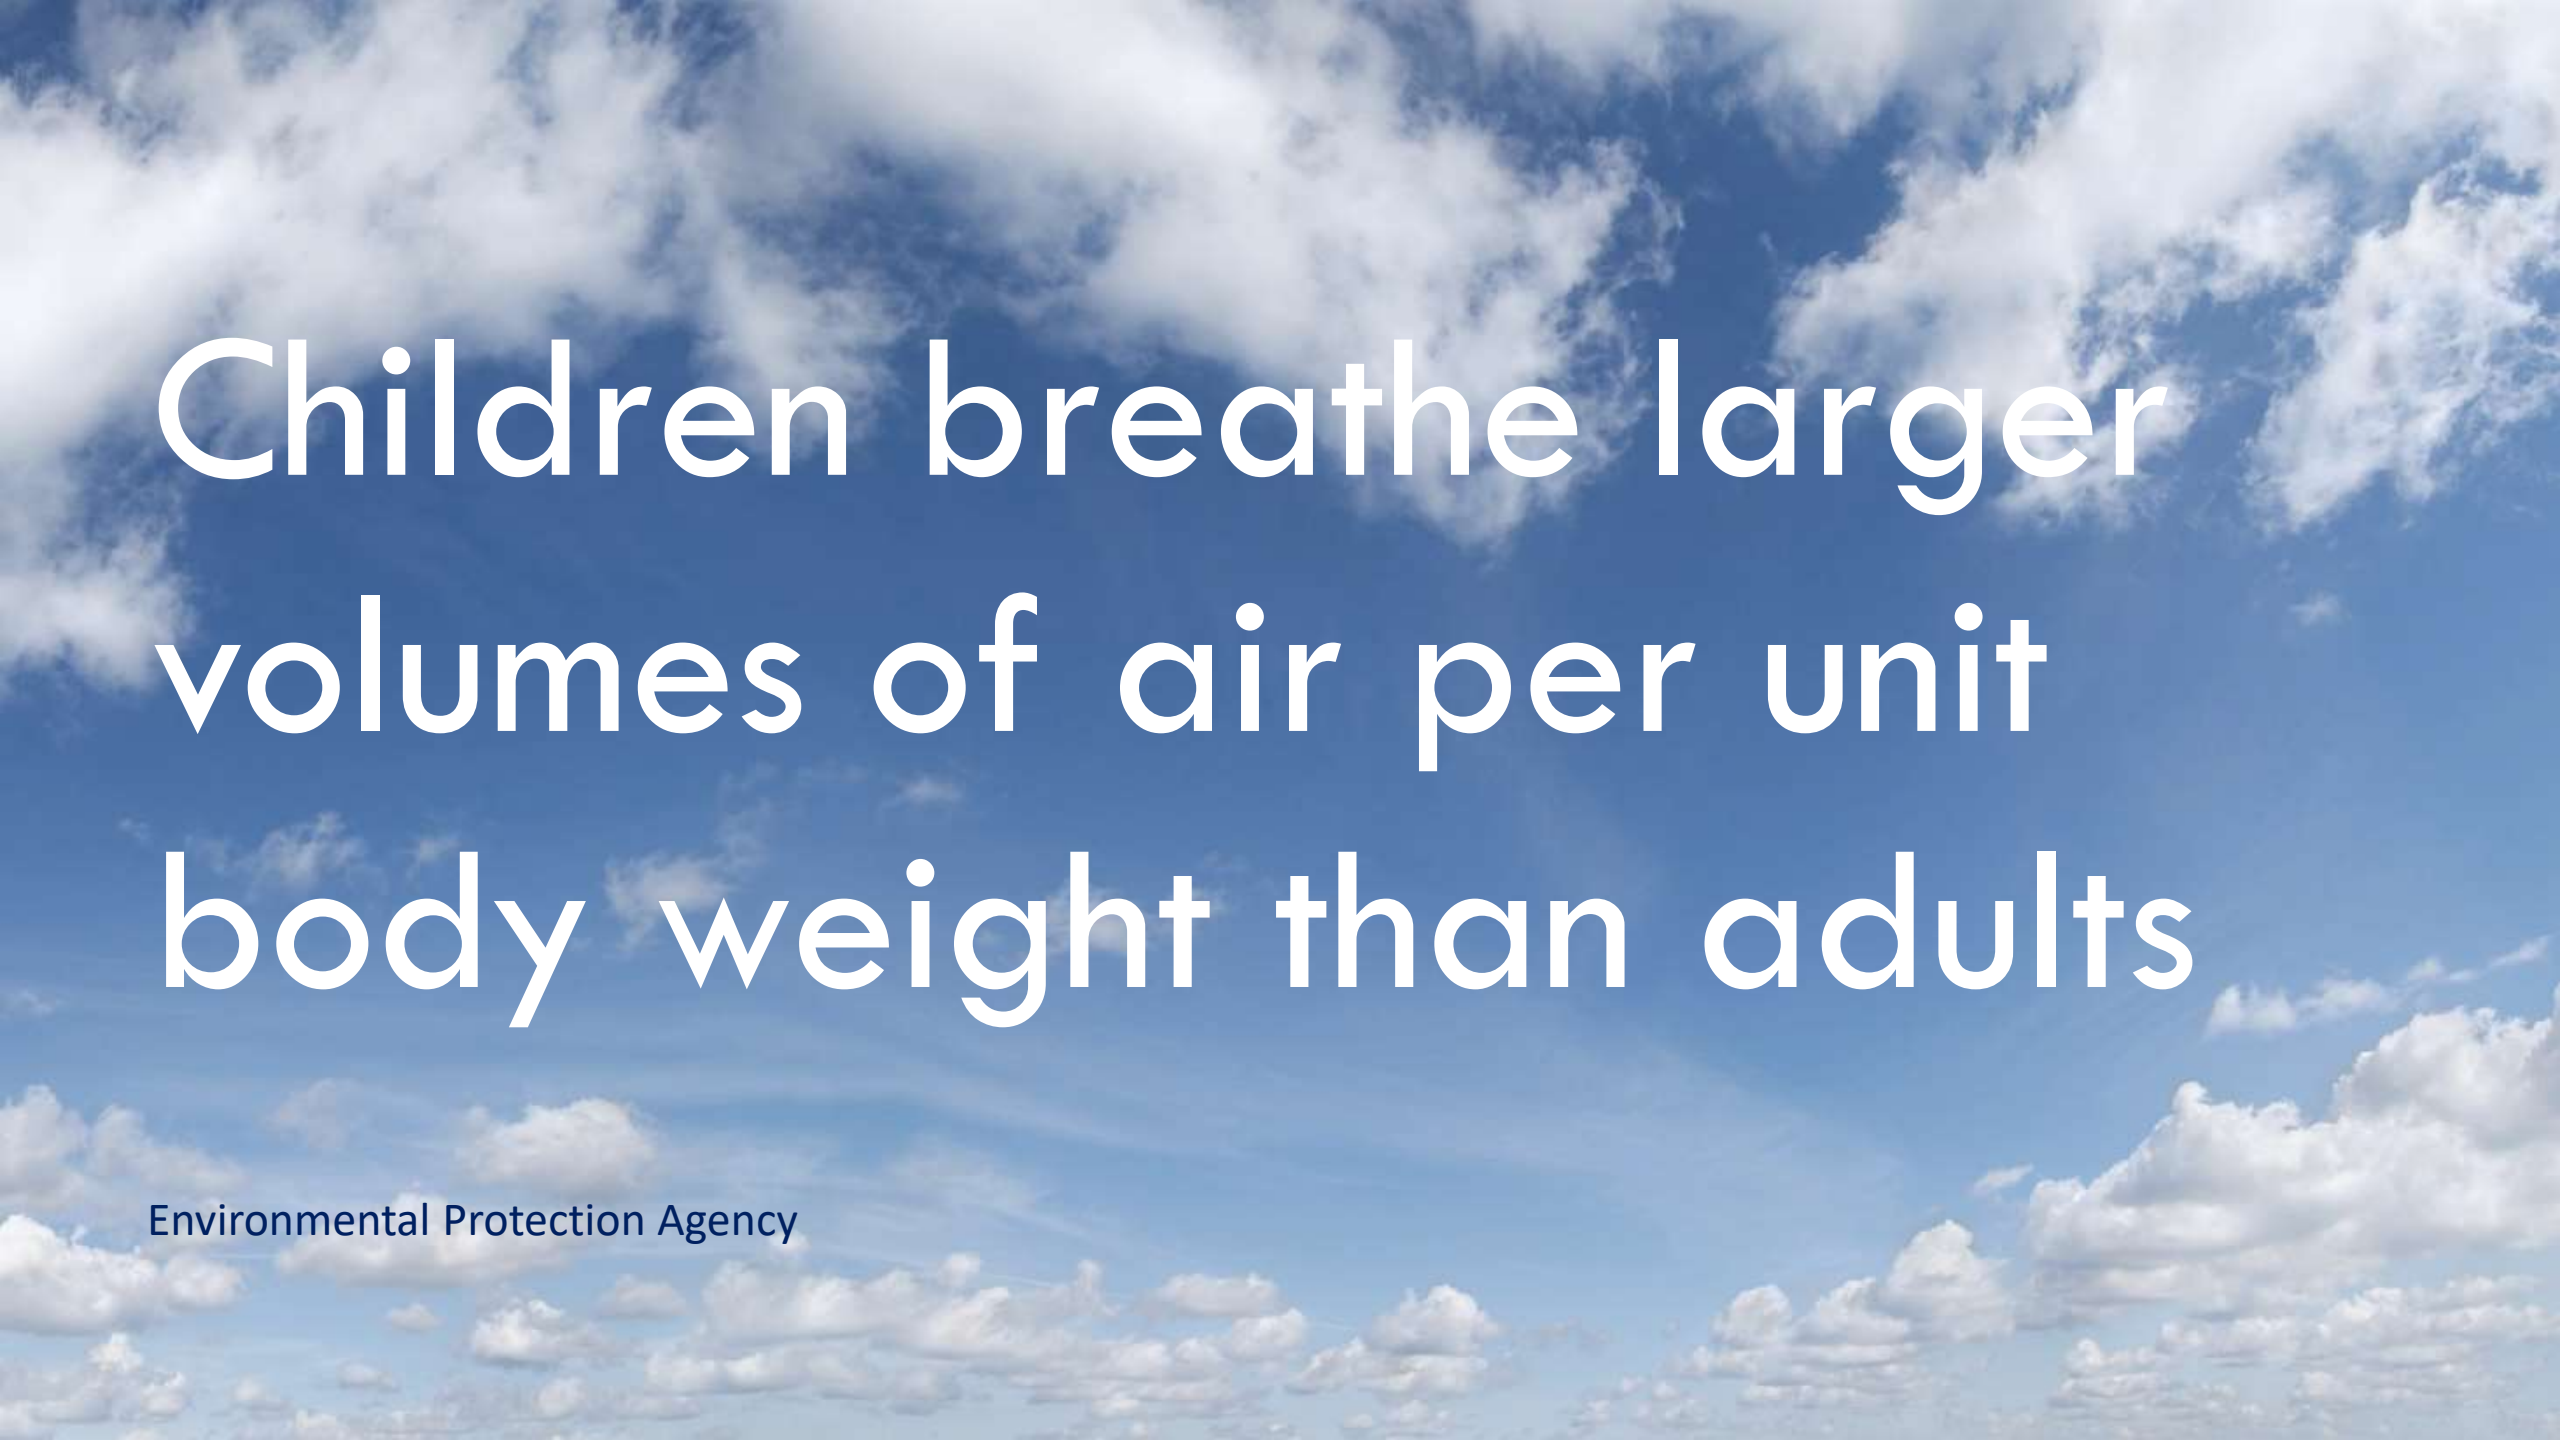

- LED lighting fixtures at 0.55 watts per square foot
- Daylight Harvesting, Dimming and Occupancy Controls
- Glazing Location & Quantity
- Window Treatment

# HVAC

- Variable refrigerant flow (VRF) heating and cooling
- Latent and sensible wheel-type energy recovery
- Building automation system

Children breathe larger  
volumes of air per unit  
body weight than adults

Environmental Protection Agency

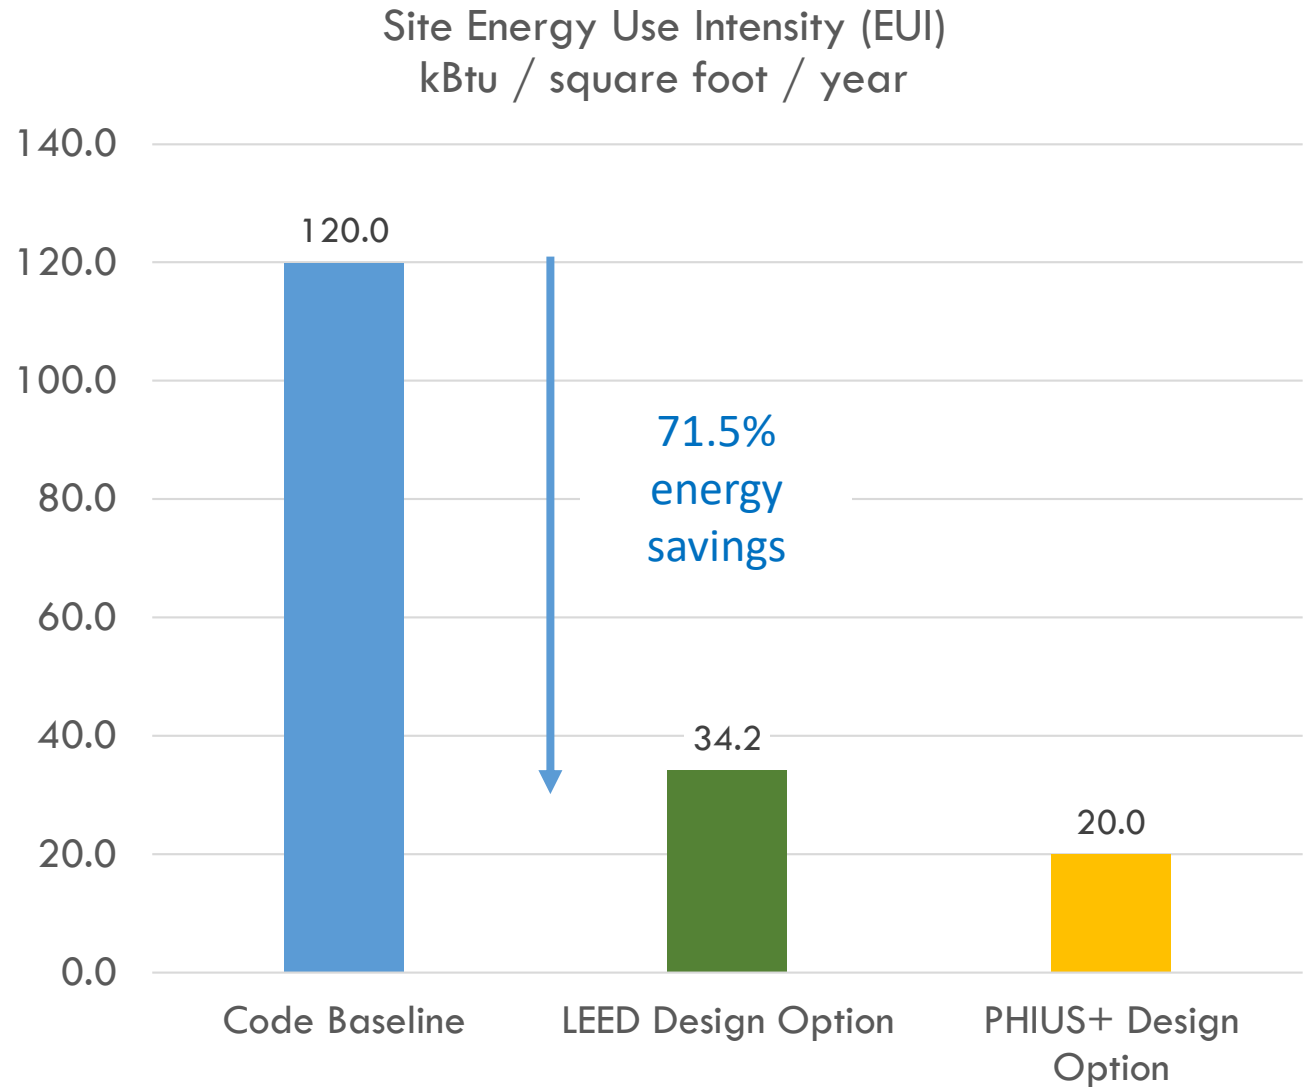

# VENTILATION

- Code ventilation rate equivalent for children and adults
- Ventilation is large component of total building energy consumption
- Balance supply and exhaust, ventilation flow rates and maintain proper pressure

# SCHEMATIC MODELING

- Schematic design energy modeling results
- Used passive principles to achieve energy goals
- Schematic PHIUS+ model is Net Zero Energy Ready (NZER)

# HEALTH & WELL-BEING

# LEED GOLD

- Achieved LEED Gold certification under the LEED for New Construction v2009 Rating System
- Coordination with Goddard design standards
- Focus on health and well-being

# INDOOR AIR QUALITY

- Energy recovery resulted in higher quality system than typical for low-rise application
- Passive House principles result in reduced infiltration and exfiltration rates
- Tighter envelope could result in greater indoor air contaminant levels

## INDOOR AIR QUALITY (IAQ)

- Low-emitting materials in coordination with Goddard design standards
- Goddard supplies casework direct with no added urea formaldehyde resins

## IAQ BEFORE & AFTER

- Construction IAQ Management Plan
- General Contractor completed building flush-out to remove dust and contaminants
- Green Cleaning Policy uses materials and equipment that are less toxic and promote indoor air quality

# COMFORT

- ASHRAE 55 addresses temperature, humidity, air movement and radiant temperature
- Lighting and thermal comfort controls for staff
- Daylight and views

# LESSONS LEARNED

# BLOWER DOOR TESTING: DURING CONSTRUCTION

- PHIUS+ requires whole-building air tightness test and performance  
 $q_{50} \leq 0.050 \text{ CFM}_{50} / \text{SF}$
- Per square foot of building envelope
- We completed preliminary test before gypsum wallboard to identify major issues
- Preliminary Results:  $0.20 \text{ CFM}_{50} / \text{SF}$

# BLOWER DOOR TESTING: END OF CONSTRUCTION

- PHIUS+ requires whole-building air tightness test and performance  
 $q_{50} \leq 0.050 \text{ CFM}_{50} / \text{SF}$
- We completed final test before occupancy
- Final Results:  $0.070 \text{ CFM}_{50} / \text{SF}$

## TIPS FOR SUCCESS

- PHIUS+ provided an established roadmap to superior energy performance versus “testing” 15+ energy conservation measures
- Engage General Contractor early in process
- Review potential lead times of products contributing to Passive House

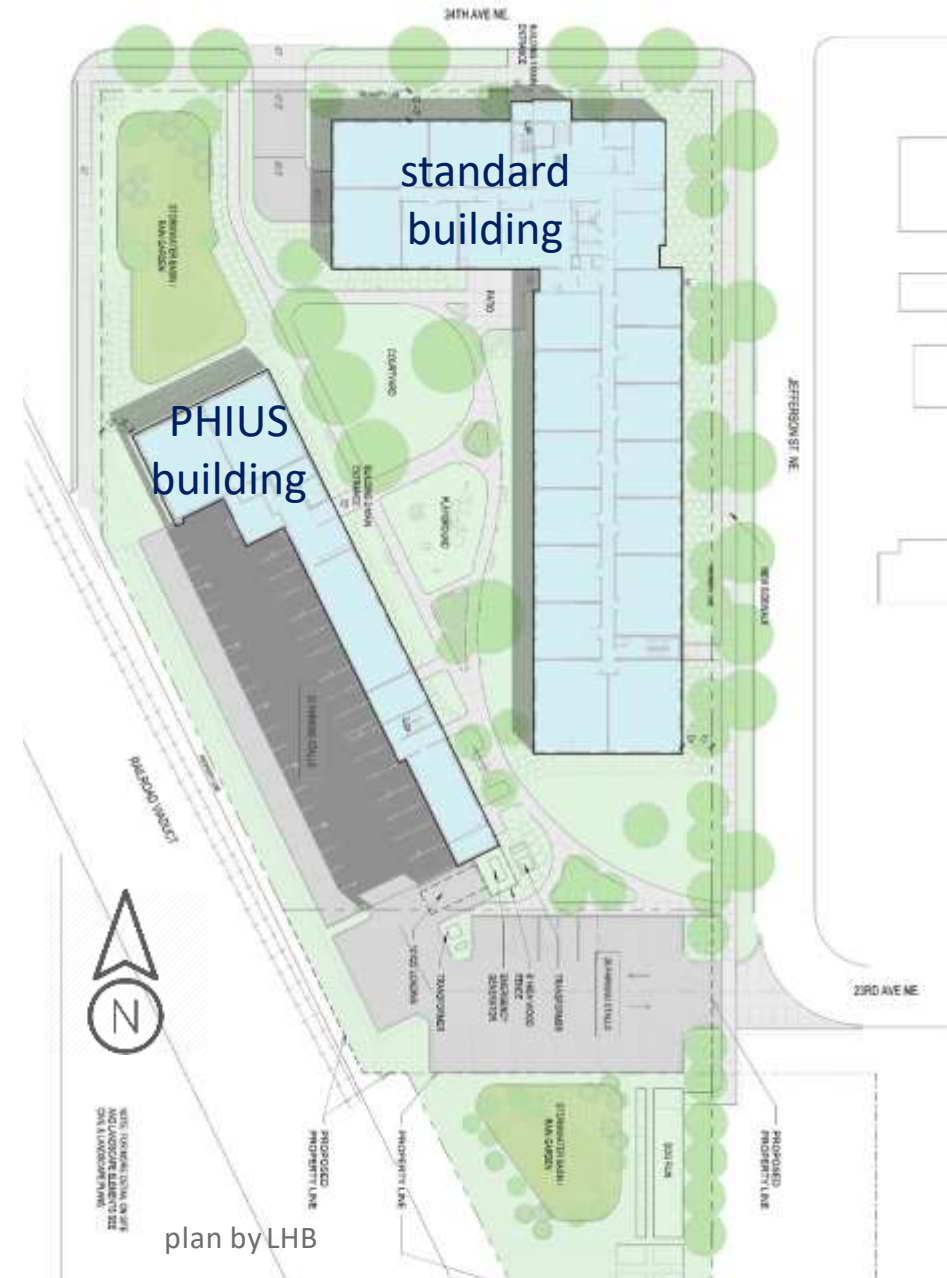

## CASE STUDY #2

# PROJECT OVERVIEW

- Minneapolis, Minnesota (6A)
- 118 total units Affordable Housing
- One standard and one PHIUS building with same unit mix
- PHIUS Building Metrics
  - Units 59
  - iCFA 53,000 SF
  - Envelope/iCFA 1.06
  - Occupants 156
  - Density 341 SF/Occupant

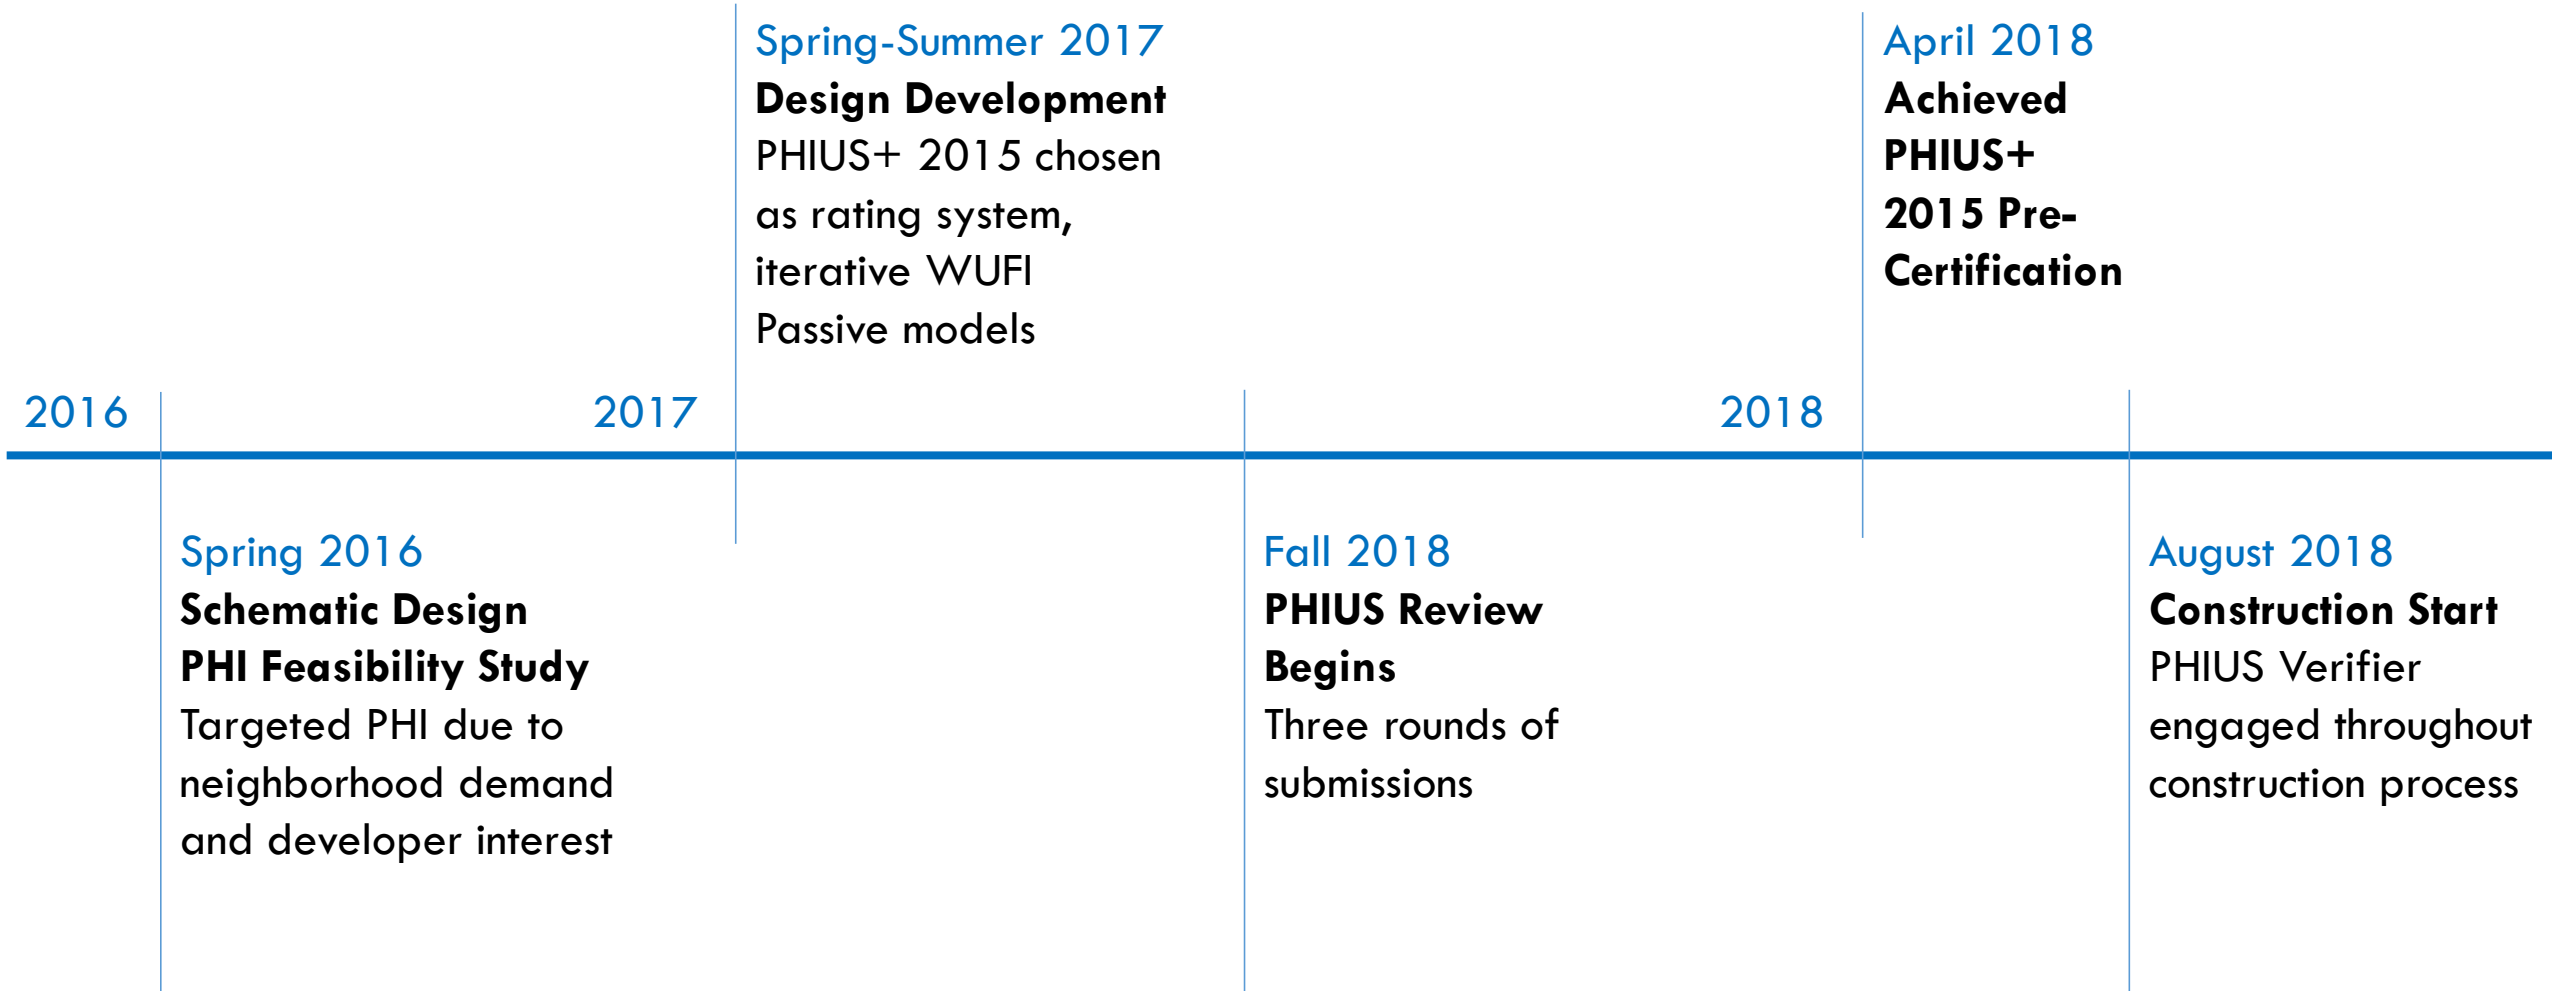

# WHY PHIUS FOR AFFORDABLE HOUSING?

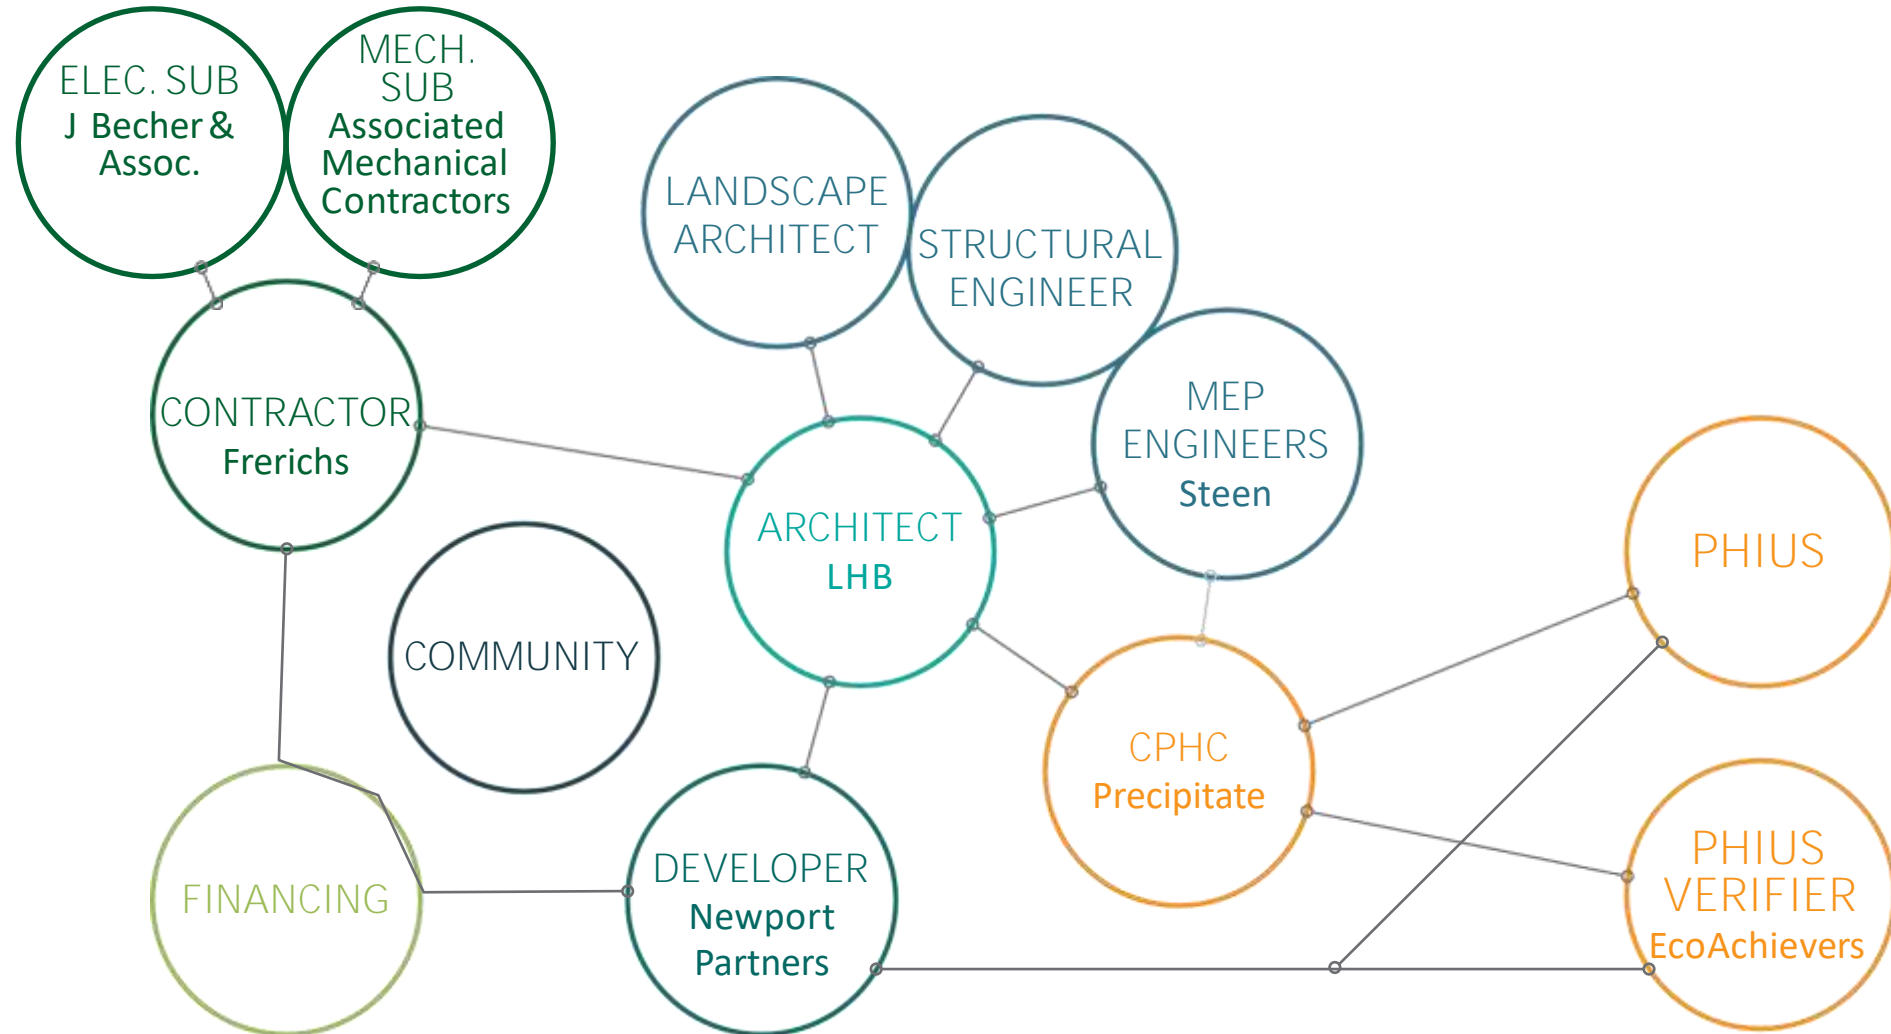

# TIMELINE

# FEBRUARY 2019 PROGRESS

# TEAM STRUCTURE

# STRATEGIES OVERVIEW

## INCREASED R-VALUES AND AIR SEALING

Roof Insulation	<b>R-55</b>
Wall Insulation	<b>R-19 + R-9.6 CI</b>
Slab Insulation	<b>R-20 CI</b>
Awning Window	<b>U-0.17, SHGC 0.2</b>
Fixed Window	<b>U-0.15, SHGC 0.27</b>

## SYSTEMS

VRF HVAC System with Centralized Energy Recovery Ventilation (ERV)

All LED Lighting

Heat Pump Dryers

DHW Preheat by VRF

40 kW Rooftop Solar

# ENERGY TARGETS

# ENERGY TARGETS

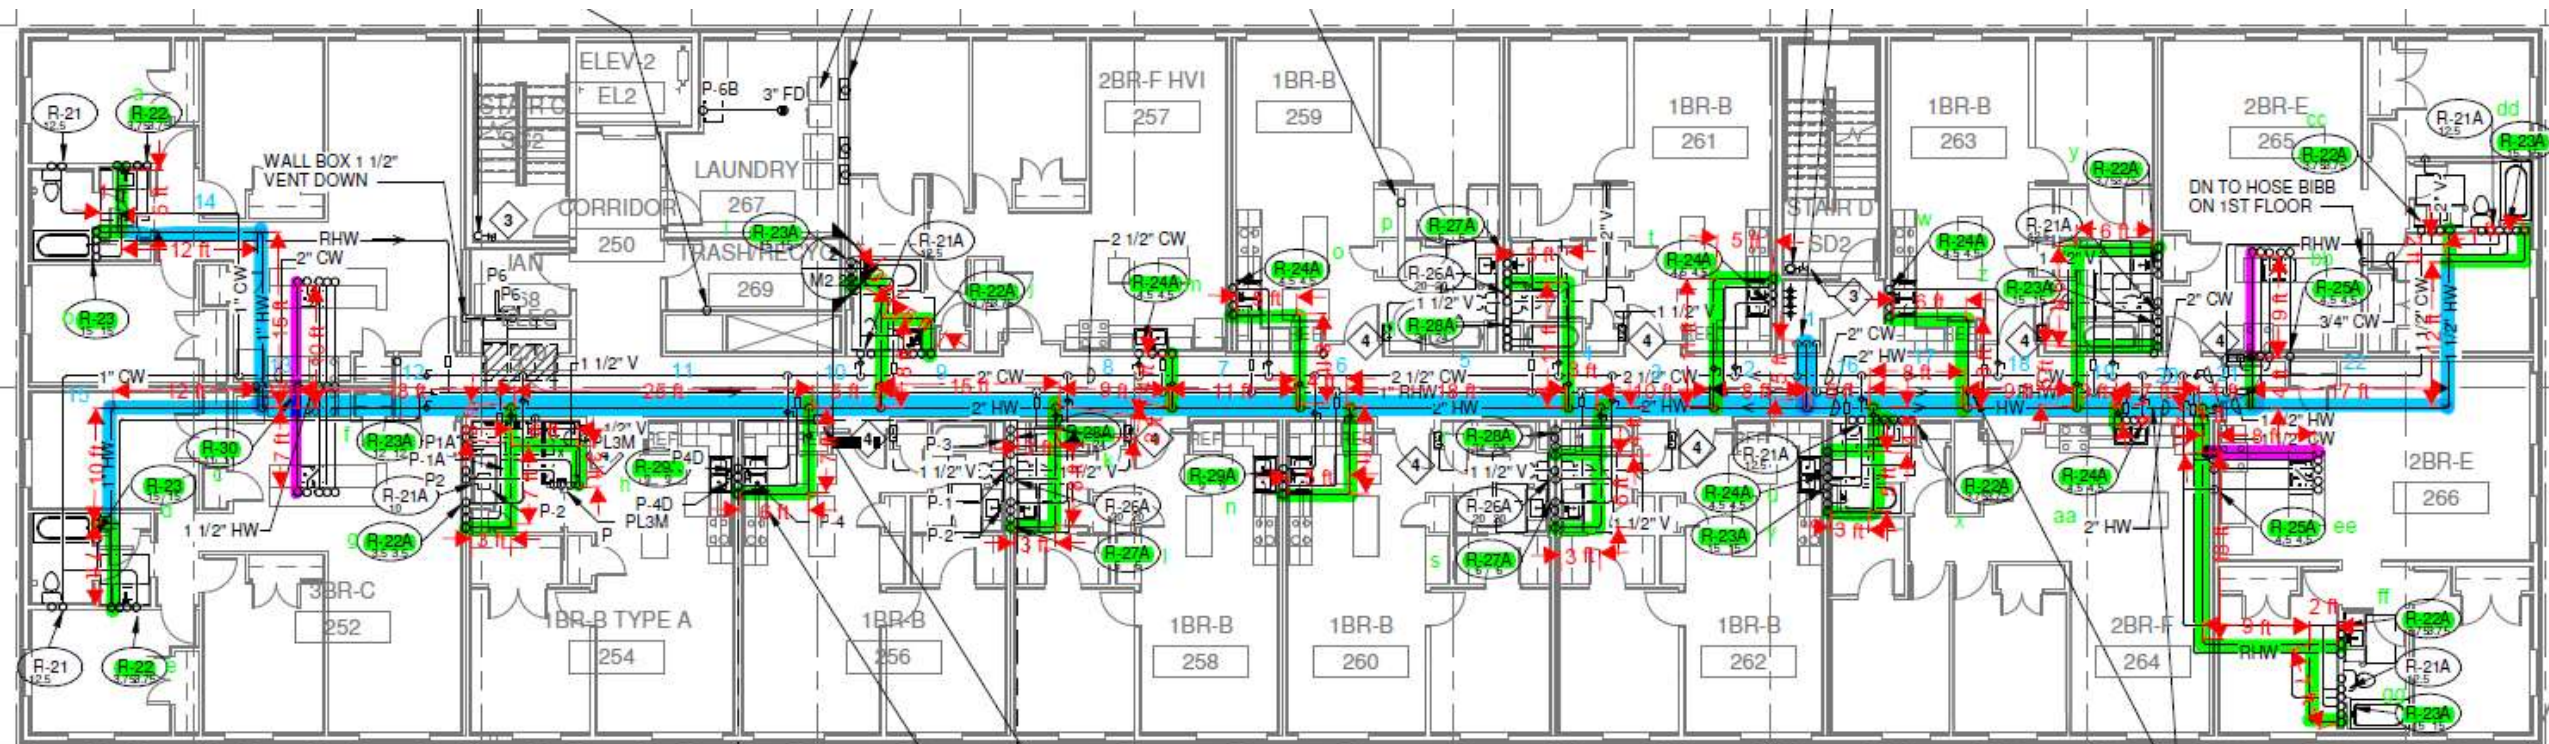

# TOTAL ENERGY DEMAND

# DOMESTIC HOT WATER

- Recirculating Loop layout
- VRF used for DHW preheat up to 400 gallons whenever excess heat
- Could alternatively use solar preheat

# THERMAL BREAKS

**WITHIN THERMAL ENVELOPE**

**THERMAL BREAK AT TUCK-UNDER PARKING**

# THERM MODEL

# DRYERS

- 3 Standard, 6 Heat Pump Condensing Dryers
- Reduced make-up air allowed us to come in under energy targets
- Heat Pump Condensing Dryers aren't yet available for commercial leasing – waiting for future technological advancements

# UTILITY DELIVERY STRUCTURE

- **Utility Supplied Metering**
  - 120 Electric meters
  - 61 Gas meters
  - Residential energy rate
  - 118 units annual utility services charges \$27,289
- **Wireless Monitors**
  - 2 Electric meters
  - 2 Gas meters
  - Commercial energy rate
  - No Utility Service Charges
  - \$32,580 in Utility Service Savings

# COST COMPARISON

PHIUS Building Unit Cost  
(Excluding site)

- \$163,750
- +\$140,000 total for solar

Standard Building Unit Cost  
(Excluding site)

- \$163,995

## Proposed Projects to PHFA, 2018 Construction Cost (Projected)

- Conventional application
- Successful Passive House application
- Unsuccessful Passive House application

Avg. conventional = \$186.50  
Avg. Passive House = \$180.00  
Avg. Passive House (awarded) = \$178.75

slide courtesy CSBR

# WHY PHIUS FOR AFFORDABLE HOUSING?

# WHY PHIUS FOR AFFORDABLE HOUSING?

## PHIUS+ 2015 REQUIREMENTS

- High-performance building envelope
  - Thermal comfort
  - Moisture control
  - Durability
- Fresh air requirements
  - Direct bedroom supply
  - MERV 8 (MERV 12)
  - Limited exposure to combustion gas
- DHW design

## OCCUPANT BENEFITS

- Resilience
  - extreme weather
  - power outages
  - housing cost uncertainty
- Remediation of environmental pollution
- Increased occupant comfort
- Increased occupant health
  - reduction in mold, bacteria, dust, pests
  - cardiovascular
  - stress

## COMMUNITY BENEFITS

- Lower turnover = connection to community
- Resilience
- Proactive care for vulnerable populations
- Economics
- Emissions
- Prototype

## OWNER BENEFITS

- Funding opportunities
- Reduced maintenance/operation costs
  - utilities
  - envelope durability (3rd party verified)
  - lower turnover

For more information on some benefits, see Norton, Ruth Ann, Brendan Wade Brown, Kiki Malomo-Paris, and Elizabeth Stubblefield-Loucks. "Non-Energy Benefits of Energy Efficiency and Weatherization Programs in Multifamily Housing: The Clean Power Plan and Policy Implications." *Green & Healthy Homes Initiative*, September 2016.

## TIPS FOR SUCCESS

- Meet early and often with the team, and have MEP charrettes directly with CPHC
- Determine who is gathering performance data from manufacturers
- Use WUFI Passive model for its intended purpose – certification & envelope optimization
- Submit requests for Technical Committee Review for innovative system design
- Avoid excessive SF/person
- Consider which rooms are ‘inside building envelope’
- A PV system will likely be necessary in multifamily housing to meet per-person source energy targets

Group Design Build – Residence, Cambridge MA
